Dear Jim,

It's been nearly a year since your team so expertly installed the earth anchors as a repair to the easterly end of my seawall. The work was done under the existing dock, without the necessity of any removals or landscape disturbance, which certainly pleased me.

I am happy to report that the seawall, which had started to fail by overturning, has experienced no further horizontal movement. The potential failure seemingly has been arrested and the concomitant expense has been avoided which pleased me even more! The seawall continues to serve its intended purpose and the dock is fully useable, thanks to your well engineered system.

Good luck with your business plan; your sytem is a hands down winner!

With warm regards,

Heyward Boyce
